

Gorbel Tether Track™ Fall Arrest Anchor System

- Reduces risk of injury in elevated work environments
- Achieves compliance to safety guidelines

Hoosier Crane is pleased to offer the Gorbel Tether Track™. We service many heavy manufacturing plants like recreational vehicle facilities where workers climb to the top of coaches during assembly and routine maintenance. RV plant Safety Coordinators will appreciate the Tether Track for two reasons:

- It reduces the risk of injury in elevated work environments
- It was designed by qualified engineers to exceed the OSHA 1926 Subpart M Construction Standard as well as ANSI Z359 Fall Protection Code

Hoosier Crane chose the Gorbel Tether Track fall anchor arrest system because it's a reliable, cost-effective way to provide fall protection. Features include:

- Designed to support multiple workers, each weighing up to 310 pounds with tools (custom-engineered systems are available)
- Monorail system available for applications where a worker travels in a straight line
- Bridge system available where workers must move along the X and Y axis

The systems were easy to install and they work smoothly, no hang ups. I've tested it myself. It's easy to move around and it's easy to get used to working with it."

Scott Smith
Safety Coordinator
Renegade / Kibbi, LLC

- Dual tracks allow workers on top of a vehicle to pass each other without disconnecting their lanyard from the rail
- The rigid rail system provides shorter free fall distances, reduced risk of secondary fall injuries (such as swinging into obstacles), longer distances between support centers, and no negative impact on second worker in the event of someone falling
- System stops the fall sooner and provides effective protection even in low headroom applications

Hoosier Crane recently sold seven Tether Track systems to Renegade / Kibbi in Bristol, Indiana. Renegade manufactures custom coaches and their workers climb to the top of coaches to inspect seals, vents and satellite dishes. The average height of the vehicles is 13 feet. Scott Smith, Safety Coordinator at Renegade, ordered the Tether Track systems after an insurance agent pointed out the risks employees were taking by working on top of the coaches without fall protection. Since installation, all workers are now required to use the Tether Track systems whenever working at any height above 4 feet, in keeping with OSHA standards.

Cranes, Hoists, Parts, Installation, Support, 24-Hour Emergency Service

Crane sales, fabrication and installation

On-site, in-house and emergency service

Parts inventory

Engineering support

Services

Sales

We are able to quote all crane and hoist items from the smallest part to complete crane systems.

24-Hour Emergency Service

We provide 24-hour emergency service to get your crane back in service as quickly as possible.

On-Site Repairs

Hoosier Crane is fully equipped to repair all makes and models of cranes and hoists at your location.

Fabrication and Installation

Hoosier Crane has the equipment and manpower to fabricate, deliver and install cranes and other industrial projects.

Engineering Support

Our professional engineering support will design your crane system and help you get and keep your crane at top-operating performance.

Overhead Crane Operator Training

Our 2-3 hour course provides your operators with the proper terminology and operating practices to maintain a safe working environment for all of your employees.

Large Parts Inventory

Hoosier Crane can provide most hoist and crane components directly from our inventory. We also have a service van that makes pre-determined scheduled visits.

OSHA Compliant Inspections

We use OSHA 1910.179, ASME B30.2, NEC and other applicable standards to accurately perform and document your crane inspections.

On-Line Ordering

Order hoists, cranes, and parts at our easy-to-use web site (www.hoosiercrane.com).

Customer Support

We will go out of our way to keep your cranes and hoists running effectively and efficiently.
