WORKSTATION CRANES

FREE STANDING WORKSTATION CRANE

Free standing workstation jib cranes are a flexible and cost effective option for handling loads from 150 to 4,000 pounds. This type of crane doesn't require existing support structures to install and will maximize floor space to increase productivity.

MONORAIL TRACK WORKSTATION CRANE

For small to medium work loads along a fixed path, the monorail enclosed track workstation crane helps increase productivity and workflow. A monorail workstation can be integrated with more tracks, curves, interlocks, and switches to create a complete monorail system to transfer loads.

CEILING MOUNTED WORKSTATION CRANE

Ceiling mounted workstation cranes are the best solution for increasing lighter workload productivity without sacrificing floor space. These provide full rectangular coverage underneath your bridge and runway so mobility is always an option.
